

Environment & Sustainability Policy

Our Commitment to protecting the environment for future generations

Our focus is to lead the energy revolution and take action on climate change and build resilience for a low carbon future. Our solar PV systems are built to minimise our impact on the natural environment and prevent pollution.

Todae Solar commits itself to minimising its impact on our environment through:

- Having an environmentally sustainable aware culture, where responsibility is assigned and understood.
- Conserving natural resources by reusing and recycling materials.
- Using, in our own operations, processes that do not adversely affect the environment.
- Ensuring the responsible use of energy throughout the organisation.
- Taking steps to improve environmental performance continually.
- Conducting rigorous audits, evaluations, and self-assessments of the implementation of this policy.
- Enhancing awareness among our employees – educating and motivating them to act in an environmentally responsible manner.
